

Project Initialization and Planning Phase

Date	03 JULY 2026
Team ID	XXXXXX
Project Name	A Comprehensive Measure of Well-Being
Maximum marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

I am	I'm trying to	But	Because	Which makes me feel
A policymaker, researcher, or development analyst who evaluates the human development level of countries.	Quickly and accurately predict the Human Development Index (HDI) category using Life Expectancy, Education, and GNI indicators.	Manually analyzing multiple socio-economic indicators is time-consuming, complex, and prone to inconsistencies.	There is no intelligent system that instantly analyzes these indicators and predicts the HDI category with meaningful insights.	Overwhelmed by complex data analysis and uncertain about making timely, data-driven development decisions.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A policymaker evaluating a country's development	Assess the Human Development Index (HDI) level accurately.	Multiple development indicators must be analyzed together.	It is difficult to manually evaluate and compare countries using different socio-economic factors	Uncertain about making informed policy decisions.
PS-2	A researcher analyzing global development trends.	Compare the human development levels of different countries.	Large datasets are complex and time-consuming to analyze manually.	Development indicators vary significantly across countries and require detailed analysis.	Frustrated by the lengthy analysis process.

PS-3	A student or data analyst studying HDI.	Understand how factors like life expectancy, education, and GNI influence HDI.	The relationship between these indicators is not immediately obvious.	Multiple variables contribute simultaneously to the final HDI classification.	Curious but confused about the impact of each factor.
PS-4	A government official planning development strategies.	Identify areas that need improvement to increase a country's HDI.	There is no quick way to predict development outcomes based on available indicators.	Traditional reports provide historical data but lack predictive insights.	Motivated to use data-driven solutions for better planning.
PS-5	A user accessing the HDI prediction system.	Predict the HDI category by entering development indicators.	Manual calculations are complex and require expert knowledge.	HDI depends on multiple socio-economic variables and statistical analysis.	Confident when receiving instant and accurate predictions.
